EDUCATION

University College Dublin (UCD)

BSc Computer Science — Expected June 2029

Dublin, Ireland

EXPERIENCE

Founder — SANFI Technologies

Dublin, Ireland

July 2026 – Present

- Founded and built a technology services company delivering custom websites, iOS/Android applications, SaaS platforms, ERP systems, and bespoke business software for clients.
- Owned end-to-end technical architecture and delivery across web, mobile, SaaS, and ERP projects, working directly with clients to translate business requirements into functional software.
- Directed development using React, React Native, JavaScript, Python, and REST APIs, coordinating with external development teams and managing delivery from requirements through deployment using Git/GitHub.

Software Developer — Digital Adversa

Multan, Pakistan

June 2026 – August 2026

- Developed and maintained production websites using React and cross-platform mobile applications using React Native, contributing across the full development lifecycle from requirements through testing and delivery.
- Developed and maintained custom SaaS and ERP applications, collaborating with the team to translate business requirements into functional, tested software.

PROJECTS

F1 Race Strategy Predictor & Simulator | Python, FastF1, Pandas, NumPy, Scikit-learn, Streamlit, Monte Carlo Simulation

- Built an end-to-end race strategy simulator using real Formula 1 telemetry from the FastF1 API, fitting per-compound tyre degradation curves and Monte Carlo-optimising pit-stop strategies across 50+ generated strategy shapes.
- Solved the fuel-load/tyre-age collinearity problem in lap-time modelling using fixed-effects regression across pooled race data, isolating tyre degradation from fuel burn and track evolution.
- Enforced physically meaningful monotonic tyre degradation curves via constrained optimisation with a tiered fallback strategy, and mitigated survivorship bias in sparse tyre-compound data using physics-informed floors and confidence-weighted blending against a global fallback model.
- Deployed the simulator as an interactive Streamlit dashboard for exploring tyre degradation behaviour and comparing optimised race strategies.

Pathfinding Visualiser | Python, Algorithms, Graph Traversal

- Built an interactive visualiser demonstrating graph-traversal and pathfinding algorithms, including A*, operating in real time on a dynamic grid.
- Implemented grid-based obstacle placement and step-by-step algorithm execution to visually illustrate how A* explores and evaluates nodes to find the shortest path.

Fitrakk — Cross-Platform Fitness Tracking App | React Native, Expo, JavaScript, Redux / Context API

- Built a cross-platform fitness tracking application for iOS and Android covering workout, calorie, nutrition, sleep, and progress tracking in a single unified app.
- Implemented AI-based progress tracking to generate personalised insights from users' historical fitness data and performance trends.
- Architected the application around separate tracking, user management, analytics, and UI layers, using Redux/Context API for state management across user profiles, workouts, nutrition records, and app state.
- Designed secure authentication and persistent data storage, and built a library of reusable React Native components to support future feature expansion.

SANFI Technologies Website | React, JavaScript, Responsive Web Development

<https://sanfitechnologies.com/>

- Designed and developed the production website for my own technology startup, demonstrating real-world frontend and backend development and deployment experience.

Bullet Bluff — Winner, UCD Netsoc GameJam | Godot

<https://yoloarts.itch.io/bullet-bluff>

- Won the UCD Netsoc GameJam with Bullet Bluff, designing and implementing gameplay systems in Godot and delivering a complete, working game within a fixed, time-constrained development window.

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript

Web & Mobile: React, React Native, HTML, CSS, Expo, Responsive Web Development

Data & ML: Pandas, NumPy, Scikit-learn, Regression, Fixed-Effects Regression, Monte Carlo Simulation, Streamlit, FastF1

Tools & Platforms: Git, GitHub, VS Code, Godot, REST APIs, SaaS Development, ERP Development
